

48-core fiber optic composite cable

Article Overview

A 48-core fiber optic composite cable is a versatile cable containing 48 optical fibers, designed for high-speed data transmission, mechanical protection, and environmental resilience, suitable for both overhead power lines and indoor/outdoor installations.

Overview

A 48-core fiber optic cable contains 48 individual optical fibers, each capable of transmitting high-speed data. These fibers are typically housed in a stranded loose tube or stainless steel tube, with protective layers such as armor, jackets, or cladding to ensure durability and environmental resistance. Composite cables combine multiple functions, such as data transmission and mechanical support, in a single unit.

Types and Construction

- OPGW (Optical Ground Wire) 48-Core Cable
- Designed for overhead power transmission lines, providing both lightning protection and optical communication.
- Construction options include aluminum-clad steel (ACS) wires for lightweight strength or stainless steel tubes for extreme environmental resistance.
- Customizable fiber mix (e.g., G.652D + G.655) and outer sheath materials.
- Applications: smart grid solutions, long-distance data transfer, and high-voltage line communication.
- Indoor/Outdoor Armored 48-Core Cable...
