

A complete AC DC integrated UPS power supply system

Article Overview

AC/DC Integrated UPS systems provide uninterrupted power to both AC and DC loads, combining power conversion, battery backup, and monitoring in a single, reliable solution.

Overview

AC/DC integrated UPS systems are designed to ensure continuous power supply for sensitive or safety-critical equipment, protecting against blackouts, voltage fluctuations, and power surges. They are widely used in industrial automation, process technology, infrastructure, energy, transport, and safety systems . These systems can simultaneously support AC-powered devices, such as motors, and DC-powered components, like PLCs, sensors, and communication equipment .

Key Features

- **Wide Input Range:** Many systems accept AC input from 90 to 264 VAC, allowing global deployment .
- **Integrated Battery Backup:** Systems often include LiFePO4 batteries with a high-performance battery management system (BMS), providing long-term reliability and up to 10 years of service life .
- **Seamless Switching:** The UPS function is fully integrated, enabling uninterruptible transition from mains to battery power without downtime, similar to online UPS operation .
