

Bangladesh Fiber Optic Hybrid Cable ADSS

Article Overview

ADSS (All-Dielectric Self-Supporting) fiber optic cables in Bangladesh are widely available for overhead telecommunications and power line applications, with local manufacturers like ABS Cables Ltd. and multiple suppliers offering full-spectrum solutions.

Overview of ADSS Cables

ADSS cables are all-dielectric, non-metallic fiber optic cables designed to support their own weight between poles or towers without the need for metallic support wires or messenger cables. They are commonly installed along overhead power lines and are suitable for high-voltage transmission systems, typically below 35kV, though older lines up to 110kV can also use ADSS with proper fittings. The cables are lightweight, small in diameter, and designed to minimize strain on the optical fibers, ensuring low optical loss over long distances.

Technical Features

- **Fiber Support:** Fibers are housed in loose buffer tubes or ribbon configurations with excess slack to prevent strain.
- **Strength Members:** Aramid yarns provide tensile strength and elongation properties, protecting fibers from wind, ice, and environmental stress.
- **Span Lengths:** ADSS cables can span up to 700 meters between towers, with some specialized designs reaching 1000 meters
