

Benin Standard Power Distribution Box Project

Article Overview

The Benin Standard Power Distribution Box Project is part of a broader initiative to modernize and expand Benin's electricity distribution network, connecting thousands of households and improving grid reliability.

Project Overview

The project is embedded within Benin's national electricity distribution modernization efforts, primarily managed by the Société Béninoise d'Énergie Électrique (SBEE). It aims to upgrade medium- and low-voltage distribution networks, reinforce substations, and install standardized distribution boxes to improve electricity delivery and reduce technical losses . The initiative is part of larger programs such as the PRESREDI project and the Benin Electricity Access Scale-up (BEAS) Project, which collectively target both urban and rural electrification .

Objectives

- Expand electricity access: Connect new households, businesses, and public institutions, particularly in cities like Cotonou, Porto-Novo, Lokossa, and surrounding towns .
- Modernize infrastructure: Replace obsolete distribution equipment, reduce transformer and line saturation, and implement fault-detection systems .
- Enhance reliability and efficiency: Reduce energy losses, improve voltage stability, and strengthen cybersecurity for grid operations
