

Cable Tray Installation Solution in Ukraine

Article Overview

Cable tray supports in Ukraine should be installed using galvanized or stainless steel systems, following DIN EN 61537/BS EN 61537 standards, with proper mounting elements and support spacing to ensure safety, durability, and compliance.

Cable Tray System Overview

Cable tray systems are designed to support and organize electrical and communication cables in industrial, commercial, and civil buildings. They can be installed on ceilings, walls, or floors and are typically made of steel or stainless steel, often with galvanization for corrosion protection . Common types include solid trays, perforated trays, ladder trays, and wire mesh trays, each suitable for different load and ventilation requirements .

Support Elements and Mounting

Support elements are critical for mechanical stability. These include:

- Wall brackets and support brackets for vertical or horizontal mounting
 - Suspended supports for ceiling installations
 - Center suspensions for long spans
- Mounting elements such as plates or clamps attach cable trays to supports and can also hold junction boxes or devices . Proper spacing of supports depends on tray type, cable weight, and environmental conditions, typically ranging from 1.5 to 3 meters for ladder or solid trays
