

Cable routing bracket fixing clamp

Article Overview

Cable routing bracket fixing clamps are devices used to secure, organize, and support cables along walls, ceilings, or within cable trays, ensuring safe and efficient cable management.

Types of Cable Clamps and Brackets

- Loop and Routing Clamps: These clamps hold cables in loops or along a defined path, suitable for light to medium-duty applications and available in metal or plastic options (McMaster-Carr) .
- Beam and Heavy-Duty Clamps: Designed for high-load or high-voltage cables, these clamps often feature polyamide housings with glass fiber reinforcement and may include foam inserts for smooth surfaces (HellermannTyton) .
- Cable Tray Supports and Brackets: Used to secure cable trays to walls or ceilings, these brackets provide structural support and can accommodate solid-bottom, ventilated, or ladder-type trays (RS) .
- Perforated Clamps and Straps: Flexible metal or plastic straps with holes for screws or bolts, ideal for fastening cables to beams or other structures (IndexFix) .

Fixing Methods

- Direct Fixing: Using gas guns, screws, or anchors to attach clamps directly to surfaces for quick and secure installation (IndexFix) .
- Adhesive Mounting: Self-adhesive clamps are suitable for smooth, clean surfaces where drilling is impractical, commonly used in appliances or vehicles (HellermannTyton)
