

Calculator for installing cable tray elbows

Overview

Use this cable tray bend calculator to size elbow radius, arc length, setback, and bend fill for low-voltage pathways. Compare bends and plan cleaner runs. Ensure compliance with NEC, IEC, and NEMA bend-radius standards for safe cable routing. Calculate centerline arc lengths, structural setback bounds, linear chords, and offset tray travel. This calculator keeps take-up, centerline radius, and bend crowding separate so you can see whether the tray corner is too tight, too crowded, or both. IEC 61537 covers cable tray and cable ladder systems for the support and accommodation of cables, while NEC Article 392 governs cable. Calculate cable tray offset dimensions, bend section length, and horizontal run for obstacle routing. Two Bends Per Offset: Every offset requires two equal bends — one to move laterally and one to return to parallel. The total tray section consumed = $2 \times$ single bend length.
