

Can Huawei routers connect to fiber optic cables

Article Overview

Huawei routers cannot be directly plugged into fiber optic cables; they require a fiber modem or Optical Network Terminal (ONT) to convert the optical signal to Ethernet first.

How the Connection Works

Fiber optic internet delivers data as light signals, which standard routers cannot interpret directly. To use a Huawei router with fiber internet:

- Install an ONT or fiber modem: This device, usually provided by your ISP, converts the incoming fiber optic signal into an electrical Ethernet signal that your router can use .
- Connect the fiber cable to the ONT: The yellow fiber optic cable from the wall outlet is plugged into the ONT's designated optical port .
- Link the ONT to the Huawei router: Use an Ethernet cable to connect the ONT's LAN port to the router's WAN port .
- Power on the devices: Ensure both the ONT and the router are powered and wait for the status lights to indicate a successful connection .

Special Cases

Some advanced Huawei routers or enterprise models may include SFP ports that can accept fiber modules directly. In such cases, the router can interface with fiber without a separate ONT, but this is uncommon in typical home setups
