

Can I replace my router if I have fiber optic internet

Article Overview

Yes, you can replace your router when using fiber optic internet, provided your router is compatible with the ONT and supports the speeds of your fiber plan.

How Fiber Internet Works

Fiber optic internet delivers data via light signals through fiber cables, which requires an Optical Network Terminal (ONT) to convert the signal into Ethernet for your router . Unlike DSL or cable, fiber does not use a traditional modem, so your router connects directly to the ONT via an Ethernet cable .

Router Compatibility

To replace your router, ensure it has:

- A Gigabit Ethernet WAN port to connect to the ONT .
- Support for the speed tier of your fiber plan; older routers may limit performance .
- Modern Wi-Fi standards like Wi-Fi 6 or 6E for optimal speed, efficiency, and device management . Routers designed for DSL or cable (with phone line or coaxial inputs) will not work with fiber . Most modern routers, including Wi-Fi 6 and Wi-Fi 7 models, are compatible and can provide better performance than ISP-provided equipment .
