

# Can I use a fiber optic cable without a router

## Article Overview

Fiber optic internet can work without a traditional router, but an Optical Network Terminal (ONT) is required to convert the fiber signal into a usable digital connection.

### Understanding the ONT

Fiber optic internet does not use a traditional modem. Instead, an Optical Network Terminal (ONT) converts the light signals from the fiber optic cable into digital Ethernet signals that devices can use directly . The ONT is installed by your Internet Service Provider (ISP) and handles authentication, signal conversion, and ensures high-speed connectivity .

### Connecting Devices Without a Router

Technically, you can connect a single device directly to the ONT using an Ethernet cable. This allows that device to access the internet without a router. However, there are some limitations:

- Single device access: Only one device can be connected at a time unless you use a network switch.
- No Wi-Fi: Direct connection to the ONT does not provide wireless access.
- Limited network management: Features like firewall, Quality of Service (QoS), or VPN support are unavailable without a router....
