

Can fiber optic cables and 380V power cables be stored in the same trench

Overview

Can I run fiber conduit in the same trench as my other utilities?

Yes. While it's technically possible under certain conditions, there are specific requirements you need to follow to avoid damaging your network. For medium voltage (415V-11kV) and high voltage (HV) installations on mixed cable racks and ducted runs, two primary regulatory frameworks apply: Industrial/Commercial: NEC (NFPA 70) governs most non-utility installations. NFPA 70 Article 770 covers optical fiber cables; Article 300-3 addresses. If they share the same conduit, doesn't that require (per the NESC) that both cables are owned and maintained by the same company?

Just asking John Adams said: If they share the same conduit, doesn't that require (per the NESC) that both cables are owned and maintained by the same company?

Just. TECHNICAL GUIDELINE July 30, 2020 TG030 Rev. However, in looking into whether for a modification I can share them, I find the 2020 code to be less clear than is used to be. Firstly, for fiber cable in conduit.
