

Categories of Anti-corrosion Coatings for Steel Cable Trays

Overview

ISO 12944 helps engineers select a protective coating system by defining atmospheric corrosivity categories (C1 to C5 and CX) and linking the environment + durability target to coating system performance expectations. The ISO 12944 standard is an international standard for corrosion protection of steel structures and iron components using paint and coating systems. If your project spec says "C3/C4/C5," it's essentially telling you how aggressive. This white paper compares the High Resistance (HR) and Hot-Dip Galvanising (HDG) solutions and highlights the new High Resistance range, ZnAl wiremesh, ZnMg metal cable trays and accessories and ZnNi screws and bolts. Both procedures are certified and audited by AENOR, which guarantees full compliance with national and international standards.
