

Certified Optical Electro-optical Hybrid Cable OS2

Article Overview

Certified Optical/Electro-optical Hybrid Cable OS2 combines single-mode OS2 optical fibers with copper conductors for power delivery, supporting high-speed data transmission and remote powering applications.

Overview

An Optical/Electro-optical Hybrid Cable (OEHC) integrates single-mode OS2 optical fibers for data transmission with copper pairs for power delivery, not telecommunications, enabling simultaneous high-speed connectivity and remote powering of devices such as access points and terminal equipment . These cables are designed to be lightweight, compact, and easy to install, making them suitable for horizontal and vertical intrabuilding backbones.

Standards and Certification

Type II OEHCs are standardized under ITU-T L.109.1, which specifies requirements for hybrid cables supporting data rates up to and beyond 1 Gbit/s while providing remote power delivery . The OS2 fiber component complies with ITU-T G.650.1 and G.650.2, ensuring low attenuation, high reliability, and compatibility with single-mode networks . Certified cables meet installation, tensile, and environmental requirements for safe and efficient deployment.
