

Color indicating the number of optical fiber cores

Article Overview

Individual optical fiber cores are identified by a standardized color sequence defined in the TIA-598-C/D standard, allowing technicians to distinguish fibers in multi-core cables.

Fiber Color Sequence

The TIA-598-C/D standard specifies a 12-color sequence for identifying individual fibers within a cable:

- Blue
 - Orange
 - Green
 - Brown
 - Slate (Gray)
 - White
 - Red
 - Black
 - Yellow
 - Violet
 - Rose (Pink)
- Aqua For cables with more than 12 fibers, the sequence repeats in groups of 12, often using additional markers such as stripes or tube colors to differentiate higher-numbered fibers. For example, in a 48-fiber cable, the 34th fiber would be the Violet fiber in the Green tube if a tube-and-fiber system is used
