

Connect fiber optic patch cord to switch optical port

Article Overview

To connect a fiber optic patch cord to a switch, ensure the fiber type and connector match the switch port, clean the connectors, and insert the patch cord securely into the optical port.

Step 1: Verify Compatibility

- Fiber Type: Confirm whether the switch port uses single-mode (OS1/OS2) or multimode (OM3/OM4/OM5) fiber, and match the patch cord accordingly .
- Connector Type: Identify the connector type on the switch port (e.g., LC, SC, MT-RJ, or MPO) and ensure the patch cord has the same connector .

Step 2: Inspect and Prepare the Patch Cord

- Remove any protective caps from both ends of the patch cord.
- Inspect the fiber ends for dust, scratches, or contamination. Clean with a fiber optic cleaning kit if necessary .
- Check that the patch cord is not bent sharply; maintain the minimum bend radius to prevent signal loss .

Step 3: Connect to the Switch

- Align the connector with the switch port and insert it gently but firmly until it clicks or seats securely
