

Dimensions of Industrial Ethernet Steel Cable Trays

Article Overview

Industrial Ethernet steel cable trays typically range from 50mm to 900mm in width and 12mm to 50mm in depth, with lengths and material thicknesses standardized for load capacity and cable fill compliance.

Standard Dimensions

Width: Industrial steel cable trays are available in nominal widths from 50mm to 900mm, with the usable inside width slightly less due to side rail thickness. Wider trays are preferred for high-density Ethernet cabling to reduce cable stacking and heat buildup . **Depth (Side Rail Height):** Standard depths range from 12mm, 18mm, 25mm, to 50mm, depending on the tray type and load requirements. Depth affects vertical cable stacking, NEC fill compliance, and heat dissipation . **Length:** Cable trays are typically supplied in 2m, 3m, or 6m sections, with some manufacturers offering custom lengths. Longer sections reduce the number of joints but may require additional support to prevent sagging . **Material Thickness:** Steel trays are manufactured in varying thicknesses according to duty class:

- Light duty: 1.2–1.5mm
 - Medium duty: 1.5–2.0mm
 - Heavy duty: 2.0–3.0mm
- Material thickness ensures structural integrity under cable load and environmental conditions .
