

Dimensions of the Micro-Module Computer Room for Campus Network Use

Article Overview

A micro-module computer room is a prefabricated, independent unit typically consisting of back-to-back or face-to-face IT racks, UPS, and cooling systems, designed for rapid deployment and modular scalability.

Physical Layout and Dimensions

Micro-module computer rooms are composed of two rows of IT racks, arranged either back-to-back or face-to-face, forming a closed aisle for efficient airflow management . The cold aisle is enclosed at the front of the racks, and the hot aisle at the rear, ensuring separation of supply and return air to maximize cooling efficiency . The exact dimensions depend on the number of racks, but a typical small-scale module can accommodate 4-12 racks, with aisle widths generally ranging from 1.2 to 1.5 meters for cold aisles and 1.0-1.2 meters for hot aisles to allow maintenance access .

Power and Cooling Requirements

Each micro-module is equipped with independent power distribution and UPS systems, allowing it to operate autonomously from the main computer room . Power cabling is routed via overhead or top-of-rack cable bridges, with sufficient length reserved for connection to the distribution rack . Cooling is provided by near-end air conditioning units or chilled water systems placed close to the racks, enabling a localized cooling cycle that isolates the module from the larger room environment . Emergency drainage and floor drains should be installed if chilled water systems ar...
