

Distribution Box 211 High Voltage

Article Overview

The Distribution Box 211 is a low-voltage terminal box rated up to 100A, while true high-voltage junction boxes are designed for 11kV-66kV systems and industrial or utility environments.

Distribution Box 211 (Low Voltage)

The Distribution Box 211 is a compact terminal junction box commonly used in electrical engineering cabinets for low-voltage applications. Key features include:

- Current Rating: Maximum withstand current of 100A, suitable for single-phase or small industrial circuits .
- Construction: Brass conductive and flame-retardant housing with PA nylon material, providing insulation, impact resistance, and fire protection (94V-2 rating), .
- Design: Small body with multiple splitting heads, saving wiring space; transparent dust cover allows visual inspection without opening the box .
- Installation: DIN rail or base plate mounting for quick and convenient setup .
- Operating Temperature: -30°C to 110°C, suitable for standard indoor and cabinet environments . These boxes are ideal for low-voltage distribution, control panels, and compact electrical installations, but they are not suitable for high-voltage applications.

High-Voltage (HV) Junction Boxes

For high-voltage systems (11kV-66kV), specialized HV junction boxes are required. These are engineered for:...
