

Distribution Box EFD

Article Overview

EFD distribution boxes are modular, robust enclosures designed for safe power and signal distribution, including use in hazardous industrial environments.

Overview

A distribution box, also known as a power distribution box or fuse box, is a central hub for distributing electricity from the main supply to various circuits within a building or industrial facility. It protects circuits and devices from overloads and short circuits using fuses or circuit breakers, and ensures personal safety through residual current devices (RCDs) that interrupt electricity in case of leakage currents. Modern distribution boxes may also include surge protection, smart home modules, and time relays for enhanced control and efficiency.

EFD-Specific Features

The EFD series (Engineered Fluid Dispensing or Eaton's EFD enclosures) includes explosion-proof and industrial-grade distribution boxes suitable for hazardous areas such as chemical plants, oil refineries, grain processing, and metal handling facilities. Key features include:

- Explosion-proof design to prevent ignition of flammable gases or dust outside the enclosure.
- Compact and durable construction with mounting lugs, threaded hubs, and lockable covers for secure installation.
- Single-gang and multi-gang configurations supporting various amperages and pol...
