

Distribution Box Wiring Coding Rules

Table Diagram

Article Overview

A distribution box wiring diagram shows the proper connection of main switches, MCBs, RCCBs/RCDs, busbars, and earth/neutral links, following standard color codes and safety rules.

Key Components of a Distribution Box

- Main Switch/Isolator (DP MCB): Controls the incoming supply and isolates the system for maintenance or emergencies .
- Residual Current Devices (RCCB/RCD/RCBO): Protect against earth leakage, electric shock, and insulation faults .
- Miniature Circuit Breakers (MCBs): Protect individual circuits from overcurrent due to overload or short circuits .
- Busbars: Phase busbar distributes live supply; neutral and earth bars collect return and protective conductors .
- Surge Protection Devices (SPD): Optional, for transient voltage protection .
- Wiring: Phase (Live), Neutral, and Earth conductors connected according to color codes (e.g., L = brown/red, N = blue/black, PE = green/yellow), .

Typical Single-Phase Wiring Layout

- Incoming Supply: Phase (L) and Neutral (N) enter the main DP MCB.
- Main MCB Output: Connects to the input of the RCCB/RCD.
- RCCB Output: Phase and neutral are routed to the MCBs for individual circuits.
- MCB Outputs: Connect to the respective loads; earth wires connect to the earth b...
