

Distribution box fixed on the wall

Article Overview

A wall-mounted distribution box is an electrical enclosure fixed directly to a wall, housing circuit breakers and control equipment for safe power distribution.

Overview

A wall-mounted distribution box is designed to be attached to a wall surface, making it ideal for spaces where floor space is limited, such as homes, offices, and small commercial areas . These boxes typically contain circuit breakers, switches, and other control devices, allowing electricity to be safely distributed across different circuits. Their elevated position keeps them away from water spills, foot traffic, and dust, while also providing easier access for maintenance .

Materials and Protection

Wall-mounted boxes are usually made from metal (steel or aluminum) or high-grade plastic, offering durability and protection against environmental factors . They come with IP ratings that indicate their resistance to dust and water:

- IP54: Suitable for indoor use, protecting against dust and splashing water .
- IP65: Suitable for outdoor or harsher environments, providing complete protection against dust and water jets .

Installation

Installing a wall-mounted distribution box is straightforward:...
