

Does broadband not have a fiber optic cable

Overview

Standard broadband connectivity uses cable, wireless, satellite, or DSL technology. So, then, what is fiber-optic technology?

Fiber-optic internet provides an Internet connection through. Fiber optic and cable internet both provide broadband connectivity but differ in how they transmit data and deliver performance. These two are the most popular wired internet solutions. Both broadband and fiber optic internet deliver high-speed internet – but the technology behind them, and the performance they offer, are very different. Let's answer a few questions we're frequently asked to give you a better idea of how these connectivity options differ. Are you looking for better. Here's a concise overview before we dive in: traditional broadband (DSL, cable, satellite) provides “always-on” internet through copper, coax, or wireless links, while fiber optic internet carries data as pulses of light over glass fibers for vastly higher throughput and minimal signal loss.
