

Does quantum communication eliminate the need for fiber optic cables

Overview

In this latest demonstration, scientists transmitted these ultra-secure messages over a traditional telecom network without needing to lay new quantum-specific cables, significantly reducing deployment complexity. Northwestern engineers have successfully demonstrated quantum teleportation over a fiber optic cable already carrying Internet traffic, introducing the new possibility of combining quantum communication with existing Internet cables. Getty Images Northwestern University engineers are the first to. A recently published article in Nature states that scientists have sent quantum information across a record-breaking 158 miles using ordinary computers and fiber-optic cables.
