

Does the fiber optic switch come with a fiber optic module

Overview

Fiber optic switching cards, also known as fiber optic switching modules or fiber optic switching line cards, are common components in modular switches or routers. An SFP switch uses Small Form-Factor Pluggable (SFP) modules to form a network switch for high-speed connectivity between devices. VERSITRON manufactures high performing fiber and ethernet switches that provide the user with an “All Fiber” configuration in which the majority of the ports are SFP module compatible. This type of setup allows you to extend your fiber optic network from a central “hub” location to many remote. Most modern fiber-enabled network switches require an SFP transceiver module featuring a duplex (two strand) multimode OM3 or duplex single mode OS2 connection with LC connectors. Download the Application PDF SFP transceiver. Managed and unmanaged Layer 2 and Layer 3 fiber optic Ethernet switches. While traditional ports use fixed connectors, these SFP ports give you more flexibility.
