

Dp multimode fiber optic repeater

Article Overview

A DP multimode fiber optic repeater extends high-resolution DisplayPort signals over multimode fiber, supporting video, audio, and USB HID signals up to 1100 meters.

Overview

A DP multimode fiber optic repeater is designed to transmit DisplayPort signals over multimode fiber, allowing high-resolution video and audio to travel longer distances than standard copper cables. These devices often support dual-mode DisplayPort, meaning they can automatically adapt to DVI or HDMI displays via adapters, and can carry additional signals such as USB HID for keyboard and mouse functionality .

Key Features

- **High-Resolution Support:** Supports up to 4K/UHD resolutions at 30Hz RGB 4:4:4 or 60Hz YCbCr 4:2:0, ensuring high-quality video transmission .
- **Distance Extension:** Can transmit signals over a single multimode fiber cable up to 1100 meters for DP-OPT-TX150, with other models supporting shorter ranges like 200 meters for DisplayPort 1.2 extenders .
- **Signal Integrity:** Regenerates and amplifies the optical signal to maintain video and audio quality, reducing jitter and attenuation over long distances .
- **Dual-Mode DisplayPort:** Automatically reconfigures output for DVI or HDMI displays when using adapters, providing flexibility in mixed display environments .
- **USB HID Support:** Emulates keyboard and mouse devices, allowing transparent USB communication without additional drivers .
- **Plug-and-Play:** Typically requires no software installation, simplifying deployment i...
