

Electrical Distribution Box Material Installation

Article Overview

Electrical distribution boxes are typically made from metals like steel or aluminum, and durable plastics such as polycarbonate, PVC, or thermoset plastics, chosen based on strength, fire resistance, and environmental conditions.

Common Materials

Metals:

- Steel (galvanized or stainless): Offers high impact resistance, durability, and corrosion resistance, making it ideal for industrial or outdoor installations .
- Aluminum: Lightweight, corrosion-resistant, and suitable for residential or commercial indoor use .
- Epoxy-coated steel: Provides additional protection against rust and chemical exposure .
- Plastics:
- Polycarbonate (PC): Strong, flame-retardant, heat-resistant, and suitable for both indoor and outdoor use .
- PVC and HDPE: Lightweight, non-corrosive, and cost-effective, ideal for indoor or low-voltage applications .
- Thermoset plastics (e.g., Sheet Molding Compounds - SMC): Flame-retardant and mechanically strong, often used in low-voltage distribution boxes .
- Fiberglass-reinforced plastics: Provide impact resistance and fire safety for residential or light-duty applications
