

Elevation of pipes and cable trays

Overview

Clearances: Maintain at least 12 inches of vertical clearance above trays for installation and maintenance access (2026 NEC update). Design of Pipe Rack involves considerable planning and coordination with other engineering groups. Pipe tiers elevation calculation. Racks shall be designed to give the piping shortest possible run. Pipe rack design is one of the significant aspects of plant design and a good design contributes to integrity and reliability of the plant and the associated structures. Piping inside the process plants are preferably routed on pipe racks and piping in the off-site areas are preferably routed on. Compute precise cable tray offset geometry, run lengths, and diagonal travel dimensions for tray routing elevation changes.
