

Enterprise routers support fiber optic cables

Article Overview

Yes, enterprise routers can be connected to fiber optic cables, either directly via SFP/SFP+ ports or indirectly through an Optical Network Terminal (ONT).

Direct Fiber Connection

Many enterprise routers are equipped with SFP (Small Form-factor Pluggable) or SFP+ ports, which allow direct connection to fiber optic cables. These ports accept fiber modules that convert optical signals into electrical signals the router can process. This setup is common in data centers and high-speed enterprise networks, enabling gigabit or multi-gigabit speeds with low latency and high reliability .

Indirect Connection via ONT

In cases where the fiber service is delivered to a building without direct fiber-ready router ports, an Optical Network Terminal (ONT) is used. The ONT converts the incoming optical signal into an electrical Ethernet signal, which is then connected to the router's WAN port using a standard Ethernet cable. This method is widely used for both enterprise and residential fiber deployments .

Key Considerations

- **Router Compatibility:** Ensure the router supports fiber connections, either through SFP/SFP+ slots or by being labeled as “fiber-ready” or GPON-compatible
