

Export ONT Optical Network Terminal 100G

Article Overview

100G ONTs are high-performance optical devices designed for next-generation PON networks, supporting 100 Gbps transmission and enabling efficient global export opportunities.

Technical Overview

A 100G ONT operates as the customer-side endpoint in a Passive Optical Network (PON), connecting end-users to the Optical Line Terminal (OLT) at the service provider's central office. These devices support high-speed data transmission over single-mode fiber, often up to 10 km without amplification, and are compatible with coherent PON technologies that allow symmetrical 100 Gbps connections using a single wavelength of light (Intelbras 100G-10KM-OLT-QSFP28) . Key features include:

- Plug & Play installation with minimal configuration required.
- Hot Swap capability, allowing modules to be replaced without powering down the network.
- High reliability and low latency, suitable for enterprise, FTTx, and multi-service networks.
- Standards compliance, including ITU-T G.984/G.988 for GPON and emerging 100G coherent PON standards .
