

External battery for fiber optic fusion splicer

Article Overview

External batteries allow fusion splicers to operate longer in the field, offering portability, extended runtime, and safe charging options for various splicer models.

Overview

External batteries are designed to power fusion splicers outside of the main unit, enabling technicians to work in remote locations or during extended fiber optic installations without interruption. They are typically lithium-ion packs with integrated Battery Management Systems (BMS) to ensure safe operation, stable voltage output, and compatibility with the splicer firmware .

Brand-Specific Options

- SUMITOMO: Offers an external battery charger compatible with BU-11 and BU-11S batteries. It allows charging outside the splicer in under 4 hours using the ADC-1430 transformer, making it convenient for field use .
- AFL FSM-45S: Uses a rechargeable lithium-ion battery pack (BTR-17) with approximately 500 recharge cycles, providing reliable power for extended splicing sessions .
- INNO Fusion Splicers: Provide a range of battery capacities from 3000 mAh to 9000 mAh. High-capacity batteries (9000 mAh) can support up to 500 splicing cycles per full charge, ideal for large-scale deployments, while mid-range options (5200-7000 mAh) balance portability and runtime
