

FC Card Interface

Overview

Fibre Channel (FC) Host Bus Adapters (HBA) are interface cards that link the host system to a fibre channel network or devices. QLogic and Emulex are the two leading producers of FC HBAs, and many HBA drivers are provided in-box with the operating systems. If the drivers are not offered by your. An Ethernet card, commonly known as a Network Interface Card (NIC), is a hardware component that allows devices to connect to a network, typically a Local Area Network (LAN). Re-scanning Fibre Channel logical units after resizing a LUN If you changed the logical unit number (LUN) size on the external storage, use the echo command to update the kernel's view of the size. Replace. The CompactFlash Association (CFA) has developed specifications for the following industry standards, or card types, in the removable media industry: CFexpress ®, CFAST ®, XQD ®, and CompactFlash ®. Each industry standard has its own set of specifications, and some standards have multiple versions.
