

Fiber Optic Cable Clearing Rod

Article Overview

A Fiber Optic Cable Clearing Rod is a specialized rod used to guide, pull, or reinforce fiber optic cables during installation, ensuring smooth deployment and preventing damage.

Overview

Fiber optic cable clearing rods, also known as cable pulling rods or FRP rods, are essential tools in fiber optic network installation. They are designed to guide cables through conduits, ducts, or tight spaces, reducing the risk of bending, kinking, or damaging the delicate optical fibers inside the cable. These rods are typically made from glass fiber reinforced polymer (FRP), which provides high tensile strength, flexibility, and lightweight construction.

Types and Specifications

- **Material:** Most clearing rods are made of FRP (Fibre Reinforced Polymer) or glass fiber, offering excellent strength while remaining lightweight.
- **Diameter:** Common diameters range from 0.4 mm to 11 mm, depending on the cable size and conduit diameter.
- **Length:** Rods are available in lengths from a few meters up to 100 meters, often supplied on reels or drums for easy handling.
- **Coatings:** Protective coatings such as HDPE (High-Density Polyethylene) or EAA (Ethylene Acrylic Acid) improve grip, reduce friction, and facilitate smooth cable pulling.
- **Design Features:** Many rods include a guide head or eyelet to attach the cable, a...
