

Fiber optic LC interface on patch panel

Article Overview

LC interfaces on fiber patch panels provide compact, high-density connections for single-mode and multimode networks, supporting efficient cable management and low insertion loss.

Overview of LC Interfaces

LC (Lucent Connector) is a widely used fiber optic connector originally developed by Lucent Technologies. It features a 1.25 mm ferrule, half the size of the SC connector, allowing high port density on patch panels and racks. LC connectors use a retaining tab latch mechanism for secure connections and precise fiber alignment, minimizing signal loss and ensuring reliable performance in both single-mode and multimode networks .

LC Patch Panels

LC patch panels serve as the backbone for high-density fiber management in data centers, telecom rooms, and enterprise LANs. They are available in 1U, 2U, or larger rack sizes, with port counts ranging from 12 to 96 or more, depending on the panel design . Panels can be pre-loaded with LC adapters or left unloaded for flexible deployment. They support duplex or simplex LC connections, enabling either single or paired fiber connections for bidirectional communication .

Key Features

- High-density connectivity: Duplex LC adapters allow up to 96 connections in a 1U...
