

Fiber optic aggregation switch pairing

Overview

Install, connect and power up the device as specified in its installation guide. For more information about how to discover devices, go to axis. Enter the username and password provided on the. With AXIS D8308 Fiber Aggregation Switch you can connect multiple Axis devices using fiber midspans over long distances. Long-distance installations often require fiber optic cables to connect different sites because of. This equipment has been tested using a shielded network cable (STP) and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. Enter the username and password provided on the product. Fabric OS switches allow Fibre Channel end devices to log in to the switches through different mechanisms such as using direct connections, using Access Gateway (AG) as an intermediate, and also using third-party devices such as Cisco Unified Computing System (UCS) servers and Fabric Interconnect. Basic working knowledge of general switch functions, security, the Internet Protocol (IP), and Simple Network Management Protocol (SNMP) is assumed. Fibers in these points are either spliced.
