

Fiber optic cable and fiber optic patch cord connectors

Article Overview

Fiber optic patch cords are short optical cables with connectors on both ends, used to interconnect devices in optical networks, while fiber optic connectors ensure precise alignment and low signal loss.

Fiber Optic Patch Cords

A fiber optic patch cord (also called a fiber jumper or fiber patch cable) is a flexible optical cable terminated with connectors at both ends, designed for short-distance interconnections within networks (). They are essential for connecting servers, switches, patch panels, and optical transceivers. Patch cords are widely used in intra-rack, inter-rack, cross-connect, and FTTH (fiber-to-the-home) applications ().

Structure and Materials

- Core Types: Single-mode (SM) fibers have a small core ($\sim 9\mu\text{m}$) for long-distance transmission, while multimode (MM) fibers have larger cores ($50\text{--}62.5\mu\text{m}$) for short-distance, high-bandwidth applications ().
- Strength Members: Kevlar yarn or aramid fibers provide tensile strength and durability ().
- Jacket Materials: PVC for basic indoor use, Plenum (OFNP) for fire-resistant air ducts, Riser (OFNR) for vertical shafts, and LSZH (Low Smoke Zero Halogen) for high-safety areas ()....
