

Fiber optic cable from Finland

Article Overview

Finland is rapidly expanding its fiber optic network, with major projects aiming to enhance nationwide broadband coverage and digital infrastructure.

Current Fiber Network Expansion

Finland has seen significant growth in fiber optic availability in recent years. By 2024, 68 percent of Finnish households had access to fiber connections, with adoption rates rising to 82 percent of fixed broadband subscriptions being fiber-based . This rapid expansion reflects a strong national push to improve digital infrastructure, particularly in urban and suburban areas, while gradually extending to more sparsely populated regions .

Major Projects and Operators

Valoo, a Finnish fiber operator, is leading a major network expansion, planning to lay up to 5,000 kilometers of fiber optic cable in 2024. Construction is progressing at a pace of 50 kilometers per week, with plans to accelerate to 250 kilometers per week. The project spans over 30 towns and cities, focusing on both backbone and regional networks, and aims to introduce tens of thousands of new fiber connections . Valoo emphasizes the use of advanced technology to ensure high-speed, reliable connections. DNA, another key operator, maintains an extensive 35,000 km fiber network across Finland, including fully owned subsea cables (DNA Seaway) connecting Finland to the Nordic region. DNA provides high-capacity services, network access in major cities, and leases cable conduits for telecommunication operators, supporting both domestic and international connectivity
