

Fireproof cable tray appearance and price

Article Overview

Fireproof cable trays are specialized systems designed to protect electrical and communication cables from fire, available in various materials and designs, with prices ranging from \$0.85 to over \$10 per meter depending on type and specifications.

Appearance and Types

Fireproof cable trays come in multiple designs to suit different applications:

- **Ladder Trays:** Open, ladder-like structures with side rails and rungs, allowing excellent airflow and easy cable access. Ideal for industrial plants and high-heat environments .
- **Trough/Enclosed Trays:** Fully enclosed trays that protect cables from dust, moisture, and fire. They are often used in data centers, chemical plants, and high-rise buildings .
- **Wire Mesh Trays:** Lightweight, perforated trays providing ventilation and flexibility, suitable for commercial buildings and office spaces .
- **Solid Bottom Trays:** Continuous-bottom trays offering maximum protection for sensitive cables like fiber optics, often used in telecom rooms .
- **Specialty Shapes:** Arc-shaped, teardrop, or self-locking trays designed for aesthetic integration, curved layouts, or rapid installation . Materials commonly used include stainless steel, galvanized steel, aluminum, fiberglass-reinforced plastic (FRP), and epoxy-coated steel. Many trays feature intumescent coatings or fire-resistant boards to enhance fire protection . Colors can be customized, including black, silver, gray, or RAL-standard shades, depending on aesthetic or functional requirements
