

Floating distribution box

Article Overview

A floating distribution box is a waterproof, dustproof, and UV-resistant electrical enclosure designed for outdoor or mobile installations, protecting circuits and terminals from environmental hazards.

Overview

A floating distribution box is essentially a waterproof and weatherproof electrical distribution box that safeguards electrical components such as terminals, fuses, and miniature modules from water, dust, and UV exposure. These boxes are commonly used in solar photovoltaic systems, outdoor lighting, agricultural irrigation, marine applications, and other harsh environments where standard indoor enclosures would fail .

Key Features

- Ingress Protection (IP65-IP68): Ensures protection against dust and water jets, making the box suitable for outdoor and wet environments .
- Materials: Typically made from UV-stabilized ABS or polycarbonate, providing impact resistance, corrosion resistance, and long-term durability under sunlight .
- Thermal Range: Operates reliably in temperatures from -25°C to $+85^{\circ}\text{C}$, suitable for deserts, coastal areas, and cold climates .
- Customization: Options include different sizes, colors, flame-retardant grades, knockouts for cable entry, and DIN rail configurations for modular wiring .
- Ease of Installation: Lightweight, space-saving, and often pre-assembled with mounting rails and terminals for quick setup
