

Ftth Pre-embedded cold joint

Article Overview

FTTH pre-embedded SC cold joint connectors allow fast, reliable fiber termination in the field without fusion splicing, using a mechanical cold joint for stable optical performance.

Overview

FTTH pre-embedded SC cold joint connectors are designed for quick field assembly in fiber-to-the-home networks. They use a mechanical cold splice method, eliminating the need for fusion splicing, polishing, or glue. This makes them ideal for rapid deployment in FTTH, FTTX, and other fiber-optic network applications, including Wi-Fi, 3G/4G, and wired LAN systems .

Key Features

- Pre-embedded fiber structure: The fiber is pre-installed inside the connector, ensuring high installation quality and a high success rate .
- Mechanical cold joint: The connector aligns and secures the fiber using a V-groove or pressing structure, providing low insertion loss (typically around 0.3 dB) and high return loss .
- Fast installation: Assembly can be completed in under 90 seconds using simple tools, without requiring electrical or polishing equipment .
- Compatibility: Works with both 3mm round drop cables and 3x2mm flat cables, supporting SC UPC or SC APC types .
- Durability: Made from ABS or similar materials, these connectors operate reliably across a wide temperature range (-40°C to +85°C) and withstand harsh field conditi...
