

Global Energy Interconnection East Asia

Overview

PLANiT extends East Asian grid interconnection into the "Energy Island" concept. An "Energy Island" envisages East Asian countries generating electricity at sites with abundant renewable potential — Mongolia, the Gobi Desert, offshore wind in the East Sea — and sharing it. GEIDCO has carried out more than 100 researches, released more than 50 innovative results globally, and published more than 50 monographs and reports in Chinese and English, enhancing its influence among governments, enterprises, academia, and the public. Launched in March 2016 with its. GEI is an important platform for the large-scale development, transmission, and consumption of clean energy resources worldwide. Smart grid + UHV grid + Clean energy, adopted in the IPCC AR6 Report. Tripartite power sales agreement among Bangladesh, India and Nepal signed Vision: To facilitate the development of an interconnected and sustainable regional power system in Asia and the Pacific that promotes energy security, supports economic growth, and fosters. Since its establishment, the UNESCAP Committee on Energy has played a key role in guiding energy transition across the Asia-Pacific region. This aligns closely with GEIDCO's ongoing work.
