

High-priced optical fiber cable butterfly-shaped

Article Overview

Butterfly-shaped optical fiber cables are available from approximately \$0.03 to \$26.80 per unit, depending on specifications and quantity.

Butterfly-shaped optical fiber cables, commonly used for FTTH, indoor wiring, and data center applications, have a distinctive “8” or butterfly cross-section that allows for easy installation and bending flexibility. Prices vary widely based on core count, sheath material, and supplier. For example, wholesale options on Alibaba list prices from \$0.03 to \$26.80 per unit, with bulk orders starting from 5 units, making them cost-effective for large-scale deployments .

Factors Affecting Price

- Core Count: Higher core counts (e.g., 216 cores indoor or 288 cores outdoor) increase cost due to more fibers and complex manufacturing .
- Sheath Material: LSZH (Low Smoke Zero Halogen) sheaths are common for indoor use and slightly more expensive than standard PVC due to safety and fire-resistance properties .
- Cable Type: Indoor FTTH cables are generally cheaper than outdoor stranded loose tube cables, which are designed for durability and environmental resistance .
- Patch Cords: Pre-terminated butterfly-shaped patch cords, such as 10-meter SC/UPC single-mode cables, are priced individually and may include additional features like steel wire reinforcement for tensile strength
