

High-speed optical cable pulling machine

Article Overview

High-speed optical cable pulling machines are specialized equipment designed to efficiently and safely install fiber optic cables with controlled tension and high traction capacity.

Overview

High-speed optical cable pulling machines are used in the installation of fiber optic cables in underground conduits, pipelines, or aerial setups. They are engineered to maintain smooth cable movement, prevent stacking or damage, and ensure tension remains within safe limits during installation. These machines are essential for high-density fiber networks where precision and speed are critical.

Types of Machines

- Crawler-Type Cable Tractors
 - Designed for buried pipeline construction.
 - Maintain smooth cable running without pressing or damaging the cable.
 - Typically support cable traction up to 300 kg and are praised for reliability and safety.
- Trailer-Mounted Fiber Optic Pullers
 - Example: GMP SideWinder features a 42-inch diameter single capstan for controlled force application.
 - Ideal for underground telecommunication cable installation.
 - Free-spinning sheaves reduce stress on cables and allow smooth transitions across conduit offsets
