

How much does a high-precision optical attenuator cost

Article Overview

High-precision optical attenuators typically cost between \$500 and \$5000 or more, depending on specifications and application.

High-precision optical attenuators are more expensive than standard fixed or variable attenuators due to their fine resolution, wide attenuation range, and specialized design. Fixed attenuators generally cost \$20-\$200, while variable attenuators range from \$50 to \$500 or more. Advanced types, such as thermo-optic or MEMS attenuators, can cost \$100 up to \$5000+ depending on features like attenuation range, step resolution, connector type, and wavelength compatibility (e.g., 850 nm, 1310 nm, 1550 nm) (Opelink) .

Factors Affecting Price

- **Attenuation Range and Resolution:** Precision attenuators with wide ranges (e.g., 50-60 dB) and fine step resolution (0.1 dB) are at the higher end of the price spectrum (GAOTek) .
- **Connector Type:** Specialty connectors like MPO or high-quality SC/FC connectors increase cost.
- **Wavelength Range:** Devices supporting multiple wavelengths or high-power lasers are more expensive (RP Photonics) .
- **Technology:** MEMS, fiber-to-fiber direct coupling, and electro-optic designs for high-speed or high-power applications command premium prices (Agiltron) .
- **Application:** Attenuators for telecom, laboratory, industrial, or specialized applicati...
