

How much does one meter of optical cable weigh

Article Overview

A meter of ordinary fiber optic cable typically weighs between 0.01 and 0.2 kilograms, depending on type and construction.

Typical Weight Ranges

- Indoor fiber optic cables: These are lighter, usually weighing 10 to 30 kg per kilometer, which translates to approximately 0.01 to 0.03 kg per meter .
- Outdoor fiber optic cables: Heavier due to protective layers, ranging from 60 to 200 kg per kilometer, or about 0.06 to 0.2 kg per meter .
- Armored fiber optic cables: Include metal armoring for extra protection and can exceed 200 kg per kilometer, meaning over 0.2 kg per meter .

Factors Affecting Cable Weight

- Cable Design: The number of fibers, type of jacket, and presence of strength members influence weight. Non-armored cables are lighter, while armored or outdoor cables are heavier.
- Materials: Fiber optic cables are primarily made of glass or plastic fibers, which are lighter than copper conductors. Jackets and protective layers add to the total weight.
- Installation Environment: Indoor cables are designed for minimal weight to simplify handling, while outdoor cables must withstand environmental stress, increasing weight.
