

How to bind fiber optic cables to a router

Article Overview

You cannot connect a fiber optic cable directly to a standard router; it must first pass through an Optical Network Terminal (ONT) that converts the optical signal into an electrical signal for the router.

Required Equipment

- Optical Network Terminal (ONT): Provided by your ISP, this device converts light signals from the fiber into Ethernet signals your router can use .
- Fiber optic cable: Usually single-mode with SC/APC or SC/UPC connectors .
- Router: Must have a WAN or Ethernet port compatible with the ONT output .
- Ethernet cable: To connect the ONT to the router .
- Power adapters: For both the ONT and router.

Step-by-Step Connection Process

- Install the ONT
- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Connect the fiber optic cable to the ONT's optical port, handling the connector by its plastic housing to avoid contamination or damage .
- Remove protective caps from both the fiber cable and ONT port, align the connector key, and push until it clicks securely .
- Power on the ONT and wait for the status lights to stabilize, indicating a successful connection to the ISP network .
- Connect the ONT to the Router
- Use an Ethernet cable to link the ONT's LAN/Ethernet port to the router's WAN port...
