

How to configure a fiber optic transceiver to connect to a switch

Article Overview

To configure a switch with a fiber optic transceiver, install the SFP/SFP+ module, connect the fiber cables, configure the switch ports, assign VLANs, and save the configuration.

Step 1: Prepare the Equipment

- Select the appropriate SFP/SFP+ transceiver based on your network requirements (1G, 10G, or higher) and fiber type (single-mode or multimode) with LC connectors .
- Ensure compatibility with your switch model and port type. Cisco devices, for example, require certified Cisco SFP modules .
- Work in a static-free environment and ground yourself using an anti-static wrist strap to prevent damage to sensitive components .

Step 2: Install the Transceiver

- Power off the switch if recommended by the manufacturer.
- Locate the SFP/SFP+ slot on the switch. Align the module with the slot and gently insert it until it clicks into place .
- Connect the fiber optic cables, ensuring duplex connections are reversed between devices (A to B, B to A) to match send and receive signals .

Step 3: Connect to the Switch...
