

How to connect a router when bringing fiber optic cable into a room

Article Overview

You connect a router to fiber internet by linking the fiber cable to an ONT, then connecting the ONT to your router via Ethernet.

Step 1: Understand the Role of the ONT

Fiber optic cables cannot plug directly into a standard router because the signal is optical, not electrical. The Optical Network Terminal (ONT), usually provided by your ISP, converts the light signal from the fiber into an electrical signal that your router can use. The ONT is typically installed near the fiber entry point in your room, often on a wall or in a closet.

Step 2: Connect the Fiber Cable to the ONT

- Remove protective caps from both the fiber cable and the ONT port.
- Align the connector carefully and insert it until it clicks securely.
- Handle the fiber connector by its plastic housing to avoid damage.

Step 3: Link the ONT to Your Router

- Use a high-quality Ethernet cable (Cat6 or Cat6a recommended) to connect the ONT's LAN/Ethernet port to the WAN/Internet port on your router.
- Ensure the router is fiber-ready and supports high-speed data transfer, ideally Wi-Fi 5 (802.11ac) or Wi-Fi 6 (802.11ax) for optimal performance....
