

How to connect fiber optic cable to the internet

Article Overview

Connecting fiber optic cables to the internet requires an Optical Network Terminal (ONT) to convert light signals into data, which is then linked to a router via Ethernet for home or business use.

Step 1: Check Fiber Availability

Before installation, confirm that fiber service is available in your area. Contact your internet service provider (ISP) to verify eligibility and check for existing fiber infrastructure, such as underground conduits or utility poles carrying fiber lines .

Step 2: Fiber Line Installation

A technician runs the fiber cable from the provider's network to your building. This can be done underground through conduits or via overhead lines. Modern methods like micro-trenching may be used to reduce installation time and cost . The fiber line terminates at a wall outlet or network interface device (NID) near your home or office.

Step 3: Install the Optical Network Terminal (ONT)

The ONT is a specialized device provided by your ISP that converts the fiber's light signals into electrical signals your devices can use. Installation steps include:...
