

How to connect the series wires in a three-level distribution box

Article Overview

In a three-level (three-phase) distribution box, connect each phase wire to the main switch, then distribute to MCBs via busbars, while properly linking neutral and earth conductors.

Step-by-Step Wiring Procedure

1. Identify Components and Terminals

- Main switch (MCCB or 4-pole MCB): Acts as the control point for all incoming power.
- Output MCBs (3-pole for three-phase loads): Protect individual circuits.
- Busbars: Connect the main switch to all MCBs for each phase.
- Neutral and Earth links: Distribute neutral and grounding connections to all loads .

2. Connect Incoming Power

- Connect the three-phase supply lines (L1, L2, L3) to the input terminals of the main switch.

- If using a 4-pole main switch, connect the neutral wire to the neutral terminal; otherwise, connect it directly to the neutral busbar.

- Connect the earth wire from the supply or directly from the earth pit to the earth link .

3. Distribute Power to MCBs

- Use busbars to connect each phase from the main switch output to the corresponding terminals of all 3-pole MCBs.
- Ensure that each MCB receives the correct phase to maintain balanced load distribution....
