

How to handle an open-loop fault in an optical cable

Overview

- Solutions: Clean connectors and end faces using specialised cleaning tools and solutions, inspect cables for bends or breaks and replace damaged sections, ensure compatibility and proper alignment of fibre optic components. This document presents a troubleshooting guide for fiber optic cables once deployed and in regular use. It also includes a list of common fault location items. These methods help locate and fix issues like breaks, poor splices, or damaged connectors. So, how to repair the optical cable fault?

Optical cable is composed of cable core, reinforcing steel wire, filler and sheath, etc. In addition, there are waterproof layer, buffer layer, insulated metal wire and other components as needed. Adhering to precise methodologies, we can mend impaired cables. (1) There is a backup routing optical cable that can pass through all-blocking faults. The personnel on duty in the computer room should jump-connect the business as soon as possible according to the emergency plan, use other good fiber cores to block the business on the optical fiber, and then.
